The ball is dropped from	m rest and it bounces on the plate, reaching a height h.	learning CORNER
(a) Calculate the spee	ed of the ball as it reaches the plate. [2]	
(b) As the ball loses co	ontact with the plate after bouncing, the kinetic energy of the ball	
	before bouncing. Calculate	
	b which the ball bounces,	
	the ball as it leaves the plate after bouncing. [4]	
during the bounce.		
	ne law of conservation of momentum, comment on your answer	
to (c).	[3] [J02/P2/Q4]	
	[002/72/04]	
Suggested Solution.		
(a) $v^2 = u^2 + 2gs$		
$v = \sqrt{u^2 + 2gs} = \sqrt{0^2}$	$+2(9.81)(1.6) = 5.6 \text{ ms}^{-1}$	
(b) (i) At height h,		
gain in potential	l energy of ball = loss of kinetic energy	
	$mgh = 0.90 \times \left(\frac{1}{2}mv^2\right)$	
	$h = \frac{0.90 \times \frac{1}{2}(5.6)^2}{9.81} = 1.4 \text{ m}$	
	9.81	
(ii) Since the kinetic	e energy of the ball is 90% of that just before bouncing,	
	$\frac{1}{2}mv_1^2 = 0.90 \times \frac{1}{2}mv^2$	
	$\Rightarrow v_1^2 = 0.90 \times 5.6^2$	
	$v_i = 5.3 \text{ ms}^{-1}$	
where v.: speed	d of ball as it leaves the plate after bouncing.	
	m of the ball during the bounce
